

MODULE 4: Problem Solving

Investigating the practicalities of the 15 minute city concept in your local area

Consider how realistic the 15-minute city concept for your own local area is.

Using a map of your local area and an appropriate mapping tool, remind yourself of your 15-minute circles.

How many of those are there within your immediate area?

Ask your students to consider the following six important aspects.

- working
- supplying
- caring
- learning
- enjoying
- living

These should be met within your local area if the 15-minute concept is going to apply.

What Open Data would you need to obtain to help you to identify these six aspects?
